Saving our planet

ActewAGL and TransACT show you how you can save energy and water around your school

- ☐ Heater with a timer: save energy by only heating the room when people are in it.
- ☐ Polly and her watering can: save water by using a watering can instead of using sprinklers all the time.
- ☐ Lights and light switches: save energy by switching off lights when there's no one in the room.
- ☐ Leaking taps: fix leaking taps to save water.
- ☐ Rainwater tank: save water by storing water for garden irrigation, household washing and toilet flushing.
- ☐ Pete and the recycling bin: help the environment by recycling.
- ☐ Dripper irrigation system: save water with drippers, which helps stop water from evaporating.
- ☐ Computers and other appliances: save energy by switching off appliances when not in use.

TransACT Everytime.

ActewAGL Always.
